

A Message from our President

I want to address any concerns you may have regarding having your home or business inspected, and having work done, in light of the current conditions.

Regarding our Process:

Breathe Easy Eco Solutions provides an essential service, and as such continues to operate during this pandemic with the support of our dedicated staff and management teams. We continue to closely monitor the outbreak of COVID-19, caused by the coronavirus. We are very committed to the health and safety of our workers, our customers, our vendors and the community.

We appreciate and understand that this is an incredibly challenging period and we ask that everyone utilize and respect the best practices which have been published to minimize transmission of COVID-19.

Breathe Easy Eco Solutions provides ongoing education and training for our staff on the latest infection control and hygiene protocols, so that we can continue to carry out our work in a safe and responsible manner.

Regarding our Product:

Health Canada says - Coronaviruses are enveloped viruses. This means they are one of the easiest viruses to kill with the appropriate disinfectant product when used according to the label directions.

The base that is used in Breathe Easy Eco Solutions proprietary mixed product is classified as a hospital-grade disinfectant. The same active ingredient common to many of the approved disinfectant products and named by Health Canada is the very same base that Breathe Easy Eco Solutions uses to build our extraordinary mould-killing recipe. The key to our product as a mould-killer lies in the precise mix of nearly a dozen ingredients, including essential oils and botanical enzymes. This mixture does not reduce the disinfecting power of our product in any way.

What this means that the Breathe Easy Eco Solutions product will kill the coronavirus which causes COVID-19. While hospitals and workers in other key areas are able to wipe down and disinfect hard surfaces, the method used by Breathe Easy Eco Solutions to apply the product using both a surface and air treatment means that soft surfaces also receive the application of the product, thereby disinfecting those surfaces as well. We have been retained in many locations to provide wipe downs and treatments using our product, for that reason.

None of our workers have had to stay home sick, or in self-quarantine, and none of our customers have become sick as a result of our visits, including our inspectors, who go into many houses every day.

If you have any questions or concerns, please do not hesitate to contact me at your convenience.

Sincerely,

Steve Greene
